ABSTRACT:

This module contains entry points to support exponentiation (** or *) in BASIC-PLUS-2 for DOUBLE ** LONGWORD.

ENVIRONMENT: User Mode, AST Reentrant

AUTHOR: R. Will , CREATION DATE: 22-NOV-78

MODIFIED BY:

R. Will, 1-01 - Original : VERSION 01

1-02 - Redo comments, JMP instead of BRW. RW 5-Dec-78
1-003 - Add ''' to the PSECT directive. JBS 22-DEC-78
1-004 - Redo the case analysis for base leg 0 for compatability with the PDP-11. JBS 24-APR-1979

1-005 - Change shared external references to G* RNH 25-Sep-81

                                               FUNCTIONAL DESCRIPTION:
                                                         This routine takes BASE ** EXP, using the following table
                                                         for unusual cases:
                                                        BASE > 0
BASE = 0, EXP > 0
BASE = 0, EXP = 0
BASE = 0, EXP < 0
BASE < 0, EXP even
BASE < 0, EXP odd
                                                                                                          Call OTS$POWDJ, normal case.
                                                                                                          Return 0.0.
                                                                                                          Return 1.0.
                                                                                                          Error: divide by zero
